Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. The terminal disclaimer filed 7/17/2006 has overcome the rejection in the Office Action mailed 4/17/2006. However, upon further consideration, a rejection of claims 1-9, 11-12 and 21-25 is made in view of Kearns (6,156,056) can still be sustained. Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-9, 11-12 and 21-25 are rejected under 35 U.S.C. 102(e) as being anticipated by Kearns et al. (6,156,056).

Kearns et al disclose in figures 23-25 and abstract, a device for attaching connective tissue to bone, including: a body 402 has a first configuration and second configuration, where the body includes a plurality of spaced slits 418, where each of the slits has a length, and where a distance x occurs at 418 which is smaller than a distance y occurs at 428, where the second configuration can be enlarged such that the apparatus has a larger cross section in the second configuration, and where each of the slits can comprise an angled surface at an end thereof (see fig. 23 at element 418), where the plurality of spaced slits 418 has an acute angle which is between 0 and 45 degrees (see col. 4, lines

Art Unit: 3734

20-25), and where the plurality of spaced slits comprises at least six slits (fig. 23), and where the device further comprises a suture retaining feature (100 or 400, see col. 3, lines 65-67 and col. 4, lines 1-5). As to claims 21-23, Kearns discloses in figures 23-25, abstract and sees col. 3, lines 50-62 a method for attaching tissue to bone using a system as described above.
